Career Summary

Jun 2022 - Jun 2024

BankingON Inc., Montenegro, Podgorica
Lead .NET developer (backend)

Outline

Building complicated business logic for one of the major US banks. Doing huge refactoring and migration from .NET framework to .NET Core.

Key Responsibilities

- Backend applications architecture design and implementation;
- Respond to client requirements to develop new banking features;
- Support and refactoring of existing code, including migration from .NET Framework to .NET;
- Unit and integration tests development (NUnit, xUnit);
- Mentoring junior developers.

Key Achievements

- Clean and efficient architecture design, ensured seamless and error-free code updates;
- Massive code refactoring, enabled faster and more efficient development processes and vastly decreased technical debt;
- E-Statements system design and implementation, allowing clients to get e-statements within a second after request;
- New features implementation for online credit cards management, enabled self-service credit card management, reducing in-person visits by 35%;
- Automatic release tools development, allowing to roll-out new releases virtually in a single click instead of whole day of manual preparation;
- Successful mentoring junior developers and QAs, helping them to build their skills and progress to higher levels, successful work in distributed team, based in US, Bulgaria and Montenegro.

May 2019 - Mar 2022

MoeDelo.org, Russia, Ryazan
Senior .NET developer (backend)

Outline

Implementing various reports systems for e-taxation and e-government services.

Key Responsibilities

- Project architecture design, technical specifications creation for junior programmers and QAs;
- Backend logic implementation (mostly e-reporting services).

Key Achievements

- Existing code refactoring and performance optimization, allowed to satisfy clients with huge (more than 10000) products base;
- E-Taxation reports system implementation, allowing clients to fill and send reports to taxation office with ease;
- Automatic assistant development, resulting in tenfold decrease of technical service requests to developers;
- Products management system development, allowing for clients to classify, order and merge products, which they sell;
- Successful knowledge sharing within a team, junior programmers consulting, helping support team in difficult cases.

Mar 2017 - May 2019

Pravo.Ru, Russia, Ryazan
Senior .NET developer (backend)

Outline

Implementing a product, designed for attorneys workspaces automation.

Key Responsibilities

- Complicated business logic implementation;
- Working in a very fast-paced manner;
- Tests development;
- Working in SCRUM/AGILE environment in a fully distributed team.

Key Achievements

- Development of automated documents filling system, allowing clients easily and rapidly fill various documents with information, related to their cases;
- Security mechanisms development, including SMS-based two-factor authorization system, helping to prevent unauthorized access;
- Existing codebase refactoring, allowed to significantly increase code quality;
- Extensive unit tests suite development, allowed to reduce bugs probability in Case.One (<https://case.one/>) product.

Nov 2013 - Mar 2017

EPAM Systems, Russia, Ryazan
Middle .NET developer

Outline

Implementing customizations for one of the leading companies in legaltech areas.

Key Responsibilities

- Business-logic development;
